

Tieto Compliance Cloud For a more secure IT environment

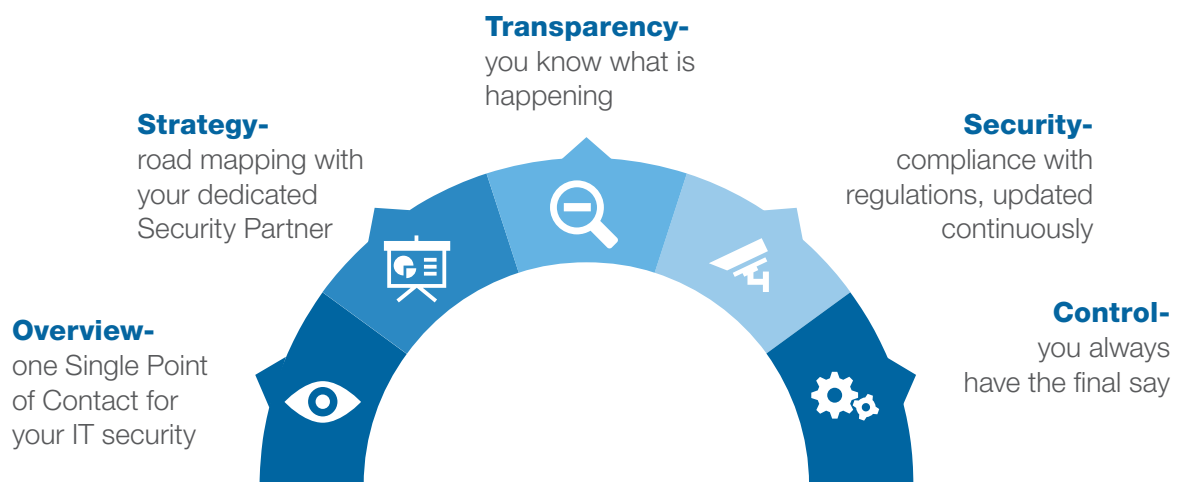

An aerial night view of a city skyline, likely Shanghai, with the Huangpu River and the Oriental Pearl Tower. Overlaid on the image is a network diagram consisting of several glowing blue nodes connected by white arcs, symbolizing a secure IT environment. The nodes are positioned at various points across the city, including near the river and among the skyscrapers.

tieto

Tieto Compliance Cloud (TiCC) is a platform that helps you comply with regulatory demands, without having to host your own servers – or lower your level of security.

TiCC is an industry-specific solution for financial services. Cloud services from Tieto follow your IT rules; your network, firewalls and security demands.

Key benefits from Tieto Compliance Cloud:

TiCC is a PCI DSS compliant platform which you could connect directly to, avoiding developing and maintaining your own compliant PCI DSS environment. TiCC gathers everything in one single cloud-based and secure environment, making it easy for you to have full control over your data. Organizations that do not comply with PCI DSS may be subject to: fines, card replacement costs, costly forensic audits, brand damage and withdrawn permission from VISA and Master Card. Compliance with PCI DSS means that your systems are secure and your reputation with acquirers and payment brands is improved.

Remain secure in the cloud with TiCC

Many worry about moving to cloud; the two biggest reasons to why people mistrust cloud is that they do not think it is safe enough and they do not think that cloud can help them to be compliant with necessary regulations. This is where TiCC comes in.

With TiCC you will be fast-tracked towards becoming compliant without taking any security risks. You can rest assured in that your business-critical data is stored in a controlled environment in Sweden and with higher data management security, continuous surveillance and advanced risk management awareness. Both our data centers have passed PCI DSS QSA audits, and once every year an independent auditor examines Tieto's cloud environment, making sure it is maintaining a high level of security.

We provide assured competence of PCI DSS and information security. The regulations for PCI DSS is updated every year, and so is TiCC – to make sure that your data is stored correctly. Customers and payment brands can trust you with their data.

A safe transition for your data

The process of moving to TiCC is well-documented, and you enjoy full transparency throughout the whole process. The project is carried out in three parts: preparation, implementation and completion. During preparation, we, together, come up with an information plan that is then used throughout the project. The plan guarantees that all concerned parties are receiving information on how the project progresses. We do not make any decisions without your say-so – you are in control.

Your IT environment is divided into appropriate systems groups (or Move Groups) which all contain servers, applications and belonging data. These groups are then moved in batches, making sure that the transit process is safe and secure.

Throughout the transition process, quality checks are carried out, such as risk analysis, and it is monitored closely until the project is completed.

A Security Partner to guide you

For that single point of contact, TiCC comes with a dedicated Security Partner who will be a sparring partner and a sounding board in security issues, helping at every step of the way. The Security Partner helps you with everything that concerns IT security, and is with you during the whole transition process. After the transition process is completed, the Security Partner continues to be your guide and sounding board.

You meet with your Security Partner once every month to discuss what needs to be done regarding your IT security. Together you come up with short and long term plans, making sure that your business is secure, now and in the future.

Using TiCC, you reduce personnel costs, you do not have to build and maintain any server rooms and you also get help with building a secure in-depth strategy for your IT security.

With Tieto as your partner, we can ensure that the integration into your existing IT systems runs smoothly. As the biggest certified supplier in the Nordics, we provide compliant infrastructure, application, support and development based on a transparent cost model, that enables you to only pay for the capacity that you actually use. This means that you do not have to invest in a complex solution that you do not know what you are going to get in return from.

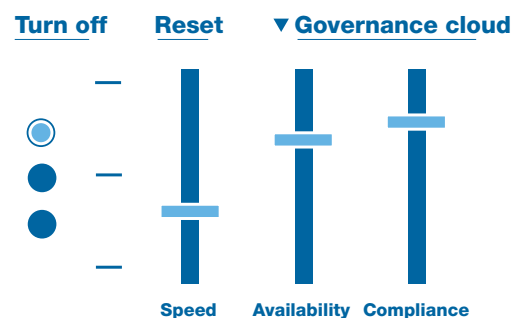

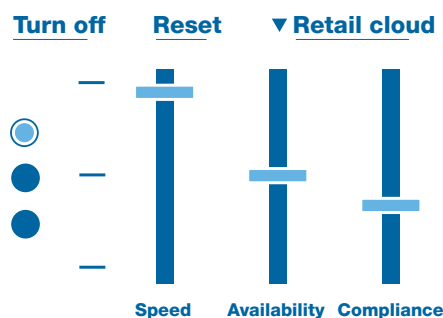

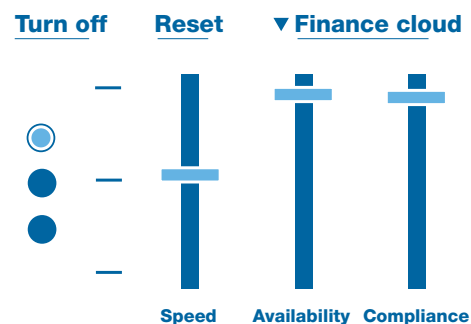

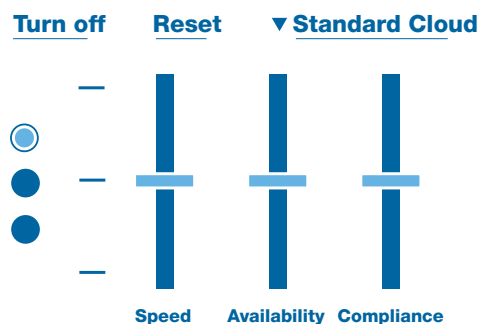

With the right solution and co-operation, there is no need to fear cloud services. Keeping your data secure and enabling compliance in the cloud for you is our number one priority. Let's embark on this journey together.

Customise your cloud service to fit your needs, scale up or down on:

- compliance
- security
- guidance
